

What if
you had
a chance
to see
better
from here...
to there?

We are currently participating in a clinical research study of a new investigational multifocal (Trifocal) intraocular lens (IOL) here in our Cedar Park office. Multifocal IOLs have been developed to improve full range vision — near, intermediate and far distances.

You may qualify to take part in this study if you currently have cataracts in both of your eyes.

If you are eligible and decide to participate in the study you will be asked to return for examinations to evaluate your vision. All visits will be provided at no cost to you and you will be compensated for your time and travel.

We would be pleased to provide more information and answer your questions. Please call our office at 512-528-1144 and ask to speak with Sheila Nardelli.
